

Capstone Project Proposal:

Predicting Housing Prices in Pinellas County, Florida

Context:

Big Florida Enterprises(BFE), a real estate company, wants to estimate the value of houses in Pinellas County, Florida. With an interest in buying and selling properties, BFE would like to be able to make offers to homeowners prior to a house's listing on the market. They are interested in what common factors affect value the most. Common known factors of housing prices are the location, the size in square feet, construction features, and the year built.

Problem Statement:

How can Big Florida Enterprises better predict house values based on previous sales data and local factors for the next two years?

Criteria For Success:

Predicted house values are within +/-10% of most recent sales

Scope of Solution Space:

- Collect data on sales and property characteristics
 - Property characteristics are
 - i. Lot size in square feet
 - ii. Total living space in square feet
 - iii. Seawall: yes or no
 - iv. Waterfront: yes or no
 - v. Evacuation zone level
 - vi. Roof type
 - vii. Foundation type
 - viii. Interior wall finish
 - ix. Exterior wall finish
 - x. Heating/Cooling type
 - xi. Zip code
- Examine correlation between characteristics and sales price
- Make a model relating characteristics and sales price

Key Data Sources:

- Sales information could come from [Pinellas County Property Appraiser Office](#)
